

The Bayesian Inference library for Python R and Julia

Sebastian Sosa¹ | Mary B. McElreath^{1,2} | Cody T. Ross¹

ACKNOWLEDGEMENTS

A brief statement acknowledging collaborators and research assistants who do not meet the criteria for authorship described above, or acknowledging funding sources, or giving recognition to nature reserves or other organizations that made the work possible.

CONFLICT OF INTEREST STATEMENT

The authors declare that there are no conflicts of interest related to the content, data or conclusions presented in this study.

AUTHOR CONTRIBUTIONS

Sebastian Sosa conceived the research idea, developed the software, and co-authored the manuscript. Mary B. McElreath contributed to the writing of the manuscript. Cody T. Ross contributed to the development of the network models, the documentation of the models included in the software, and the writing of the manuscript.

DATA AVAILABILITY STATEMENT

All implementations of *BI* are publicly available through their respective GitHub repositories for Python, R, and Julia. In addition, each implementation can be installed via the standard package repositories of the corresponding programming languages: pip for the Python version, CRAN for the R version, and the Julia package registry for the Julia version. Comprehensive documentation, including installation instructions, tutorials, and extended examples, are available on the official project website: <https://s-sosa.com/BI>.
